

WEEK 3: Become familiar with creating variable/field and if else statement with java.

```
public class Main {  
    public static void main(String[] args) {  
  
        String name = "Rayyan";  
        int age = 18;  
        double score = 75.5;  
  
        if (score >= 50) {  
            System.out.println(name + " has passed.");  
        } else {  
            System.out.println(name + " has failed.");  
        }  
  
        if (age >= 18) {  
            System.out.println("You are an adult.");  
        } else {  
            System.out.println("You are under 18.");  
        }  
    }  
}
```
